

FOR IMMEDIATE RELEASE

Kelleher Systems Represents Infinite Graphics DFM tools in the North American PCB Design Market

Endicott, NY (January 18, 2010) - Kelleher Systems (www.kellehersystems.com), a New York based reseller of Electronic Design Automation tools, today announced that it has closed an exclusive agreement for the sales of Infinite Graphics CheckMate and PAR software products for the Printed Circuit Board (PCB) Design market in North America. "PCB Designers need a tool to verify and enhance the manufacturability of their designs," said Bob Kelleher, owner of Kelleher Systems. "CheckMate and PAR bring a level of capability to designers desktops that until now has been too costly and difficult to use. This Design For Manufacturability (DFM) solution will surprise PCB Designers with its thorough and complete feature set that is both affordable and easy to use.

CheckMate is a suite of tools enabling the PCB designer to validate the manufacturing data generated during the design phase. Performing this validation prior to sending the design to the manufacturer dramatically reduces errors in manufacturing and therefore reduces board spins and decreases time to market. CheckMate automates verification (eliminates Gerber viewing), conducts a netlist extraction and compare, and gives an analysis of the manufacturability of the design to various specifications.

"I'm thrilled to have Kelleher Systems join us as a strategic sales partner," said Cliff Stritch, CEO of Infinite Graphics Incorporated. "This partnership will enable IGI to deliver value to a wider market, and empower our customers to maximize the manufacturability of their designs while reducing their time to market."

About Infinite Graphics

Infinite Graphics Incorporated is a total solutions, precision graphics company that has served the engineering and manufacturing marketplaces since 1969. IGI provides one of the widest ranges of precision photoplotting and graphics services available from a single source. IGI offers a selection of software addressing the needs of the PCB, packaging, MEMS, MOEMS, etc. design and manufacturing industries, along with the expertise to customize for the unique design, manufacturing and business needs of its customers.

About Kelleher Systems

Kelleher Systems is a new sales and distribution provider for Electronic Design Automation tools supporting the PCB and custom integrated circuit design process. Kelleher Systems was founded in January 2010 by industry veteran Bob Kelleher, formerly the Director of Sales for EMA Design Automation.
